

Paper 01 — Manifesto & Vision

WhyCremisi: The Intelligence That Governs Music

WHYCREMISI RESEARCH PAPERS — N.01
Project Manifesto and Vision

"Not a tool. A collaborator that thinks."

1. The Problem We Solve

Professional music production is a system of extraordinary complexity. An experienced sound engineer simultaneously manages dozens of tracks, chains of processors (EQ, compressors, limiters, reverbs), parametric automations across hundreds of values, and real-time creative decisions.

Existing AI tools offer *suggestions*. They stop there.

WhyCremisi does not stop at the suggestion. It acts.

2. The Vision

An AI agent that lives inside the DAW,
knows every installed plugin,
listens to every audio signal in real time,
remembers every previous session,
and intervenes — with the producer's permission —
on any parameter of any instrument.

Control Levels

LEVEL 4	Creative	— Suggests arrangements, harmonic variations
LEVEL 3	Mix	— Controls EQ, compressors, panning, gain
LEVEL 2	Plugins	— FabFilter, iZotope, Waves, UAD parameters
LEVEL 1	DAW	— Transport, routing, automations, timeline

3. Core Principles

- **Non-invasiveness by design** — every action requires explicit consent
 - **Total transparency** — every action logged, explained, reversible
 - **Contextual learning** — learns the producer's style over time
 - **Universal instrument support** — no plugin excluded
-

4. Market Differentiation

Tool	Type	Limitations
iZotope Neutron	AI mixing	Proprietary plugins only, no DAW control
LANDR	Cloud AI mastering	Offline, no real-time, no plugin control
WhyCremisi	AI producer agent	Full control, memory, personality

5. Measurable Objectives

Alpha (current): DAW control, AI streaming, persistent session memory

Beta: Third-party plugin parameters, 50+ plugin database, style learning

1.0: 100+ plugins, multi-DAW, zero-dependency installer Win/Mac/Linux

2.0: Public API, community database, multi-agent collaboration
