

Implementation Roadmap

Phases, Milestones and Zero-Dependency Installer Specification

• Phase Alpha — Foundations ✓ Complete

- ✓ VST3 + Standalone on macOS • WebSocket bridge • AI streaming
- ✓ BotFace mascot • BoxChat (8 types) • Session flight recorder
- ✓ OpenClaw Memory system • DSP Engine • Setup screen
- ✓ Advisory card (Execute/Analyze/Dismiss) • Integration tests

• Phase Beta — Plugin Control (In Progress)

- ParameterMapper with FabFilter database
- iZotope Ozone 11 + Neutron 4 database
- Plugin parameter browser UI
- Full undo stack for plugin actions
- User feedback learning loop
- Windows build (VST3 + Standalone)
- Linux build (VST3)

• Phase 1.0 — Complete Product

- 100+ plugins mapped
- VST3 auto-discovery (automatic parameter scan)
- A/B comparison
- Reference track analysis
- Multi-DAW: Ableton, Logic, Reaper, FL Studio, Pro Tools
- Zero-dependency installer: macOS • Windows • Linux
- Website + public documentation
- 30-day trial + commercial license

• Phase 2.0 — Ecosystem

- Public plugin API for third-party developers
- Community plugin mapping database
- Multi-agent collaboration (separate mix + master agents)
- Cloud profile sync (opt-in)

• Zero-Dependency Installer — Full Specification

Core principle: anyone who receives WhyCremisi has everything working at first launch. No additional downloads. No manual configuration. No external dependencies. Works offline.

— INSTALLER BUNDLE CONTENTS

CORE PLUGIN	
WhyCremisi.vst3	macOS / Windows / Linux
WhyCremisi.component	AU – macOS / Logic only
WhyCremisi.app	Standalone macOS
WhyCremisi.exe	Standalone Windows
WhyCremisi	Standalone Linux
LOCAL AI ENGINE (no internet required)	
Ollama runtime	binary for each OS
Base AI model	llama3.2:3b (~2 GB)
Advanced model	llama3.1:8b (~5 GB) [opt-in]
INCLUDED RUNTIMES	
WebView2 runtime	Windows – embedded
VC++ Redistributable	Windows – embedded
React UI bundle	pre-compiled, offline
WebSocket server	already in JUCE binary
PLUGIN DATABASE	
plugin-database.json	100+ plugins mapped
ai-presets.json	intelligent presets
ASSETS & CONFIG	
App icons (all formats)	see Paper 07
Default config	ready to use
License.txt + EULA	included

— PLATFORM INSTALLERS

macOS

Format: WhyCremisi-v1.0.pkg
Installs to: /Library/Audio/Plug-Ins/VST3/WhyCremisi.vst3
/Library/Audio/Plug-Ins/Components/WhyCremisi.component
/Applications/WhyCremisi.app
Signing: Apple Developer ID signed + notarised
Requirements: macOS 12 Monterey+, Apple Silicon or Intel

Windows

Format: WhyCremisi-v1.0-setup.exe (NSIS / Inno Setup)
Installs to: C:\Program Files\Common Files\VST3\WhyCremisi.vst3
C:\Program Files\WhyCremisi\WhyCremisi.exe
Signing: EV code signing certificate
Requirements: Windows 10 64-bit+

Linux

Formats: whycremisi-v1.0.tar.gz + install.sh
whycremisi-v1.0.deb (Debian/Ubuntu)
whycremisi-v1.0.rpm (Fedora/RHEL)
Installs to: ~/.vst3/WhyCremisi.vst3
Requirements: Ubuntu 22.04+ / Fedora 38+

— FIRST LAUNCH FLOW

1. Plugin loaded in DAW (or Standalone opened)
2. SetupScreen appears automatically
3. Choice: local AI (Ollama – already bundled) or cloud API
4. If local: Ollama starts automatically (no download needed)
5. Automatic connection test
6. Ready to use in < 30 seconds

NO additional downloads
NO mandatory registration
NO external dependencies
WORKS fully offline (with local AI)
