◆ OVERVIEW

WHYCREMISIRESEARCH

Artificial Intelligence for Music Production

Version: 2.0 | Language: English | Status: Active Research

N.	TITLE	TOPIC	PRIORITY
01	Manifesto & Vision	Philosophy, long-term objectives	★★★★★
02	System Architecture	Tech stack, components, data flows	★★★★★
03	Third-Party Plugin Control	FabFilter, iZotope, Waves — full integration	★★★★★
04	Agent Memory System	OpenClaw Memory, identity, evolution	★★★★★
05	Communication Protocol	WebSocket, OSC, C++↔React bridge	★★★★★
06	Implementation Roadmap	Phases, milestones, installer spec	★★★★★
07	Brand & Asset Identity	Logo, icons, platform specs	★★★
08	DSP Engine Deep Dive	FFT, LUFS, correlation, clipping, real-time metrics	★★★★★
09	AI Engine Architecture	Providers, streaming, function calling, context	★★★★★
10	Security & Data Model	Encryption, API keys, sandboxing, permissions	★★★★★
11	Testing & QA Strategy	Unit tests, integration, E2E, CI/CD	★★★★★
12	Deployment & Distribution	Code signing, notarization, installer	★★★★★
13	Plugin Database Schema	JSON schema for 100+ supported plugins	★★★
14	User Guide	Quick start, interface, workflows	★★★
15	Developer Guide	Contributing, dev environment, architecture	★★★

• Abstract

WhyCremisi is the first native AI system for professional music production that does not merely *suggest* changes — it **executes** them, controlling in real time the entire production chain: DAW, third-party plug-ins, automations, effects and mix. The agent operates with persistent memory, evolutionary personality and contextual knowledge of the current session.
